## Brief Abstract

### DESCRIPTION

This measure is used to assess the percentage of patients for whom radiation therapy is administered within 1 year (365 days) of diagnosis for women under age 70 receiving breast conserving surgery for breast cancer.

### RATIONALE

**National Comprehensive Cancer Network (NCCN) Breast Cancer Treatment Guideline for Invasive Cancer Guideline Recommendations v2.2006:**

**BIINV-2.** Recommends radiation therapy for patients receiving breast conserving surgery (BCS).

## PRIMARY CLINICAL COMPONENT

Breast cancer; breast conserving surgery (BCS); radiation therapy

## DENOMINATOR DESCRIPTION

- Women
- Age 18 to 69 at time of diagnosis
- Known or assumed first or only cancer diagnosis
- Primary tumors of the breast
- Epithelial malignancy only
- AJCC Stage I, II, or III
- Surgically treated by breast conservation surgery (surgical excision less than mastectomy)
- All or part of first course of treatment performed at the reporting facility
- Known to be alive within 1 year (365 days) of diagnosis

## NUMERATOR DESCRIPTION

Radiation therapy to the breast initiated within 1 year (365 days) of date of diagnosis

### Evidence Supporting the Measure

## EVIDENCE SUPPORTING THE CRITERION OF QUALITY

- A clinical practice guideline or other peer-reviewed synthesis of the clinical evidence

### Evidence Supporting Need for the Measure

## NEED FOR THE MEASURE

Variation in quality for the performance measured

## EVIDENCE SUPPORTING NEED FOR THE MEASURE

### **EXTENT OF MEASURE TESTING**

The American Society of Clinical Oncology/National Comprehensive Cancer Network (ASCO/NCCN) Quality Measures are the result of a collaborative effort to answer the call for evidence-based rigorously developed, scientifically sound measures that can be used in national accountability programs dedicated to improving the quality of cancer care. Several features of these measures are noteworthy. The final measures were derived from measure sets from the National Initiative for Cancer Care Quality (NICCQ) and NCCN that have undergone extensive testing and validation supplemented by nationally accepted practice guidelines. Furthermore, prioritization of candidate measures used an explicit, data-driven process designed to ensure that measure adoption would have the maximal beneficial impact on cancer outcomes in the population.

Refer to the article cited below and in the "Companion Documents" field for additional information.
